Scan. Order. Pay!

Turn Tables Faster with QR Ordering

Guests scan the code on their table, browse your menu, and order from their phones. Each order appears on your kitchen screen the moment it's placed, and your team bills it from the same dashboard.

No App for Guests

The menu opens in the phone browser. No download, no account.

No New Hardware

Run service on the phones, tablets, and laptops you own.

One Dashboard

Orders, tables, bills, and reports in one place.

HOW IT WORKS

01

Create Account

Sign up and configure your restaurant profile, timezone, and local currency.

02

Build Menu

Add dishes, categories, and tax rates from one workspace.

03

Generate QR Codes

Print unique QR codes customized for every table in your dining area.

04

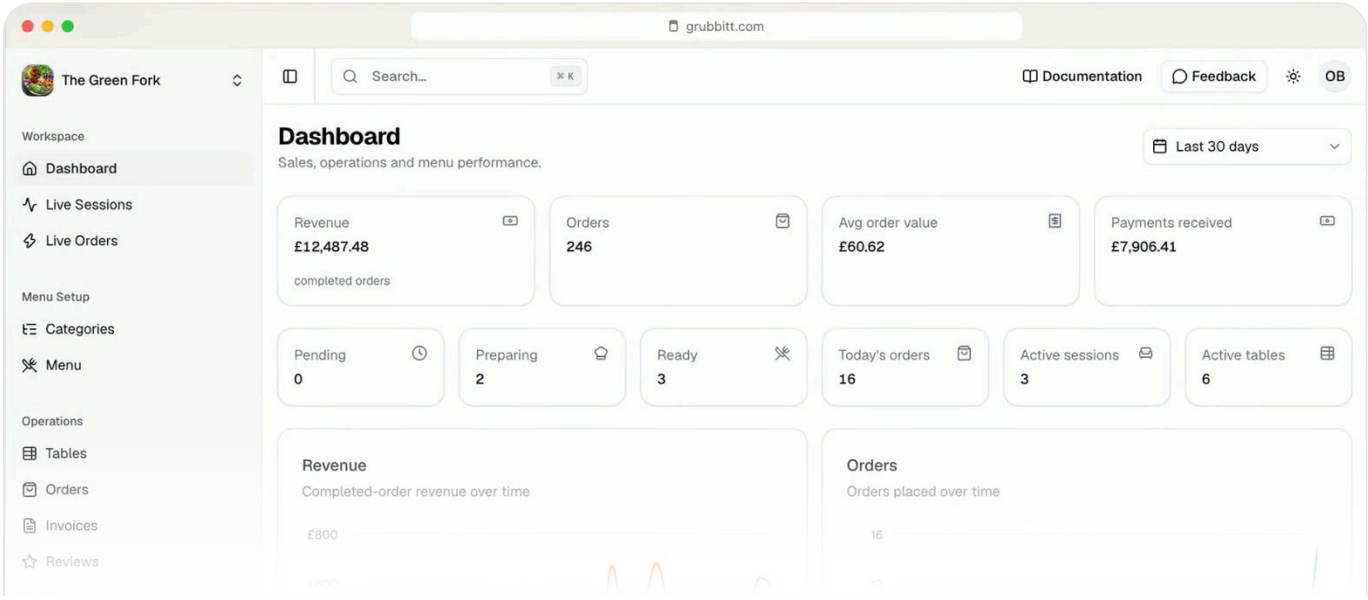

Take Orders

Guests scan, order, and pay while your kitchen receives each ticket.

EVERYTHING IN ONE PLACE

From the Table to Your Reports

Grubbitt runs the whole service: the guest menu, the kitchen board, the bill, and the numbers at the end of the day.

QR Table Ordering

Every table gets its own code. Orders arrive with the table number, options, and kitchen notes.

Live Orders Board

New orders appear on the kitchen screen at once. The guest sees each status change on their phone.

Menu From Photos

Upload photos of your paper menu. AI reads the dishes and prices for you to review.

Bills and Tax

Close a table to bill every order at once, with tax split by rate and service charges included.

Reports

Sales, dishes, taxes, payments, and tables for any range, exported to a spreadsheet.

Every Outlet

Run each outlet with its own menu, tables, and currency from one account.

Built for Your Country

Your country sets the currency, tax numbers, and rounding on every bill.

Ask Your AI Assistant

Connect ChatGPT or Claude to ask about sales in plain words. It can read, never change.
